## Flake & Cube Models

### High and Low Flow Rate Machines

Most problems with ice makers are water related (70% by manufacturers' estimates). Clean up the water and clean up most maintenance problems!

### Chief Offenders

- Dirt:** Wears pumps, blocks solenoids, pits evaporators
- Chlorine\***: Gas corrodes stainless parts, surfaces rust
- Scale Buildup:** Coats evaporator, slows harvest, lowers production, increases energy usage

### Solution

Everpure Insurice Systems:

- Provide excellent flow rates for even largest machines
- Remove dirt particles down to 1/2 micron in size by mechanical means\*\*
- Reduce chlorine, prevents rusting of stainless parts
- Reduce lime scale buildup that will cause poor ice production and freeze-up

## Sizing Ice Machines by Brand & Series/Capacity:

If you know the manufacturer and the "size" of the ice maker, EVP 1-2-3 will point you to the correct filter system or replacement cartridge.

Specialty coffee has been the fastest growing segment of the foodservice industry for the last several years. Various blends, flavored coffees and espresso products have "raised the bar" on coffee offerings. It's no longer just "regular or decaf"?

But one fact remains constant – coffee is 98.7% WATER! To make good coffee or espresso you MUST start with clean, filtered, taste- and odor-free WATER!

Pentair® Everpure filters remove dirt, chlorine, off-tastes and odors, providing you with superior "ingredient quality" water.

## Reverse Osmosis

### Hardness and Coffee

- For hardness of 12 grains and lower you can utilize Precoat [MH, BH, etc], Claris™ or Reverse Osmosis
- For hardness above 12 grains, you should only use Reverse Osmosis

The above recommendations are based on a balance of coffee volume and water quality. An excess of either or both warrants a Reverse Osmosis solution.

These sizing recommendations are merely general guidelines. For exact sizing by equipment manufacturer and model number, visit [everpuresizing.com](http://everpuresizing.com) or contact Pentair Everpure Technical Service: [servicespecialist@pentair.com](mailto:servicespecialist@pentair.com) or 800.942.1153.

## Reverse Osmosis

### Hardness and Coffee

- For hardness of 12 grains and lower you can utilize Precoat (MH, BH, etc.), ESO, Claris™ Ultra or Reverse Osmosis [RO]
- For hardness between 12 and 20 grains, you can utilize either a Claris or Reverse Osmosis solution
- For hardness above 20 grains, you should only use Reverse Osmosis

The above recommendations are based on a balance of coffee volume and water quality. An excess of either or both warrants a Reverse Osmosis solution.

### Why would I chose Claris over ESO?

- Higher performance filtration
- Blending valve allows for customized water quality
- Five-stage (vs three-stage on the ESO) filtration

For locations that would like to use a single filtration solution for their coffee and espresso equipment, consider using the Claris family of products.

You may never be called on to size a filter system for fountain drinks, but here are a few simple tips:

**Question #1:** Is the customer serving carbonated beverages only, or are they selling both carbonated and non-carbonated beverages?

**Question #2:** Is the customer using an ambient carbonator(s) or cold carbonator(s)?

**Question #3:** How many carbonators is the customer using?

If you know these three things, the rest is as easy as EVP 1-2-3!

Fountain beverages represent one of the highest profit items in any foodservice operation today. From convenience stores to fine dining, fountain drinks are present. A fountain drink is approximately 83% water! And that doesn't include the ice! So, for great tasting fountain drinks that customers will repeatedly order, use an Everpure filter system from Pentair® to assure quality and good taste. It's as easy as EVP 1-2-3!

\*Optional prefilter available.

Inconsistent or low water pressure can cause premature filter expiration and poor quality drinks. For locations with low or inconsistent water pressure you should consider a Shurflo® Water Boost System.

You may never be called on to size a filter system for fountain drinks, but here are a few simple tips:

**Question #1:** How many carbonators are there?

**Question #2:** How many bag-in-box units are used monthly?

If you know these two things, the rest is as easy as EVP 1-2-3!

Fountain beverages represent one of the highest profit items in any foodservice operation today. From convenience stores to fine dining, fountain drinks are present. A fountain drink is approximately 83% water! And that doesn't include the ice! So, for great tasting fountain drinks that customers will repeatedly order, use an Everpure filter system from Pentair® to assure quality and good taste. It's as easy as EVP 1-2-3!

Steamers generally fall into two categories: electric and gas operated. Pentair® Everpure offers solutions for the smallest to the largest commercial steam equipment. Easy as EVP 1-2-3!

Steam cooking equipment is a major part of any medium to high volume foodservice operation today. Steamers are one of the most problematic pieces of kitchen equipment. They are subject to corrosion, scale buildup on controls, boiler walls, heating elements, etc. When a steamer is down, the kitchen is severely limited in production capacity and food quality.

Keep 'em steaming with Everpure Kleensteam®!
